System Deployment Guide & Documentation

1. System Overview & Tech Stack

- **System Name:** Student Skill-Sharing System for Peer Assistance Among IT Students
- **Primary Purpose:** Helps IT students list their skills, find classmates who can help, send help requests, join lobbies for group learning, and rate their helpers.
- **Tech Stack:** Interface (Java Swing GUI), Backend (Java), Database (MySQL / XAMPP).

2. Default Test Credentials

- **Student Username:** adam
- **Student Password:** sadsad
- **Role:** Student (can act as both requester and helper)

3. Logical Data Flow

1. **Step 1:** The user logs in through the Student Skills Sharing login screen.
2. **Step 2:** The student opens Find Skills and searches by keyword or skill filter. The program queries the Student, UserSkill, Skills, and Feedback tables and shows each result with year level and average rating.
3. **Step 3:** The student selects a classmate and clicks Request Help.
4. **Step 4:** The program inserts a new row into the Request table with the status "Pending" and shows "Request sent!".
5. **Step 5:** The helper opens Request From Other Students and clicks Accept. The status changes to "Accepted".
6. **Step 6:** The helper clicks Create Lobby. The program inserts a row into the Lobby table and links the accepted requests in the LobbyMember table.
7. **Step 7:** The helper sends notes, a meetup date, and a meetup time to all members, then clicks Mark All Done. The status changes to "Done".
8. **Step 8:** The requester clicks Rate Helper. The rating and comment are saved in the Feedback table, and the helper's average rating shows on the profile and in search results.

4. Environment Setup Instructions

1. Open the XAMPP Control Panel and start MySQL.
2. Copy the `[project folder name]` folder to your computer.
3. Open a web browser and go to `http://localhost/phpmyadmin`.
4. Create a new database named `[database name]`.
5. Import the provided `[SQL file name].sql` file into the new database.
6. Open the project folder in your Java IDE and add the MySQL JDBC connector `.jar` to the project libraries.
7. Open the database connection code and set the database name, username, and password to match your MySQL settings.
8. Run the main class to open the Student Skills Sharing login screen.

9. Log in using the default credentials (Username: adam, Password: sadsad).
